

Today, I plan to work below things

1. Forms & User Input

- o Handling GET vs POST methods
- o Basic form validation and sanitization

2. Arrays & Strings

- o Indexed, associative, and multidimensional arrays
- o Array functions (sort, array_map, array_filter)
- o String manipulation and regex basics (preg_match, str_replace)

3. File Handling

- o Reading/writing files (fopen, fwrite, file_get_contents)
- o File uploads and security considerations

4. Error Handling

- o Error types (notices, warnings, fatal errors)
- o Custom error handling (set_error_handler, exceptions with try/catch)
- o Magic methods (__construct, __destruct)

5. Namespaces & Autoloading

- o Organizing code with namespaces
- o Composer basics and autoloading (PSR-4)

6. Databases & MySQL

- o Connecting to databases (PDO, MySQLi)
- o CRUD operations, prepared statements (security against SQL injection)
- o Intro to ORMs (e.g., Eloquent)

7 MVC Architecture

- o Separation of concerns (Model, View, Controller)
